

Remanufactured Forklift Parts

Remanufactured Lift Truck Parts - Forklifts are rather expensive pieces of equipment since a brand new electric lift truck unit can cost starting from \$18,000 to \$25,000, for a five thousand pound equipment. Furthermore, several thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of the same lift capacity would cost a little less and the diesel units that are capable of heavier lifting capacities could cost upwards of \$100,000. Reconditioned forklifts are an alternative in order to save a large amount of cash in view of the fact that they cost less than half the price of brand new models.

Some people think they will face more upkeep issues if they acquire a reconditioned lift truck and are apprehensive of purchasing a second-hand lift truck at a sale price. A properly reconditioned forklift would function just along with a brand new one and whichever doubts of repairs are unfounded. Even though your lift would get heavy use, so long as you take good care of the machine, it would serve all your needs and possibly save you a lot of money.

When thinking about obtaining a second-hand lift truck, it is vital to determine what the seller means by the term refurbished or reconditioned. Numerous companies do an excellent job of absolutely making over the unit previous to reselling it. This includes disassembling the forklift, rebuilding the engine, sandblasting the lift and afterward reassembling everything and finishing with a fresh coat of paint.

To properly and thoroughly rebuild a lift truck engine, a good company will completely disassemble it. A heat cleaning system could then be utilized to clean all the components. Once this step has been finished, all of the components are checked to see if they have any breakage, any extensive wear or any defects. Some parts like cylinder blocks, connecting blocks, cylinder heads and crankshafts are reground, resurfaced and resized if considered necessary. Other components like for instance nuts, bolts, gears etc. are repaired or replaced as needed.

The engine is rebuilt by hand once the overhaul has been completed. After putting it back together, a series of tests are applied to the running equipment. This is done so as to check all of the parts to ensure there are no issues or leaks. If any problems occur, the necessary alterations are made.

There is no reason to be apprehensive about buying reconditioned lift trucks from quality sellers. The process the machinery go through to be rebuilt guarantees the utmost reliability. Maintenance costs can actually work out to be less in view of the fact that you would avoid the initial phase of higher repairs projections that a brand new forklift has as it is broken in. By following routine maintenance schedules and taking care of the machine appropriately, a reconditioned lift truck would serve you well.
